AEI-CASC NEWS

Welcome 2007!

Congratulations on another great year. All of the principals at AEI-CASC and Landtec would like to thank you for your commitment and hard work and we look forward to another wonderful year. Here is a list of some project wins for the 4th quarter of 2006.

TEAMWORK AND PERSEVERANCE WINS PROJECTS IN 2006

Caltrans District 6,7,8 & 9

Water Quality Monitoring and Reporting Services. This is a 4 year, \$29.5 million dollar contract, the largest single contract awarded to AEI-CASC and the first time as a Prime Consultant to Caltrans

State of Arizona

General NPDES Support Services, Statewide

Lennar Homes, Heritage Fields

NPDES Inspection Services, 4,500 acre site

Elk Grove Unified School District

NPDES Inspection Services

Specific Plan for Alpha and Omega Development, LLC, Huntington Beach CA

Planning and Engineering for a 66 acre property

California Department of Corrections

Survey, Construction Staking

San Bernardino City

Plan Checking Services

San Bernardino County

On-Call NPDES Services

Los Angeles County Department of Public Works

Environmental Management Services

Near-Cal

Construction Site—NPDES Inspection Services

WELCOME 2007, THE YEAR OF THE DOLPHIN

The UN Convention on Migratory Species has declared 2007 the Year of the Dolphin. Here are some key facts about dolphins:

- Dolphins are aquatic mammals believed to have evolved more than 10 million years ago. The 40 species vary in size from 1.2 meters (4 ft) to 9.5 meters (30 ft) and weigh from 40 kg to 10 tons. They are carnivores, eating mainly fish and squid.
- Found worldwide in the shallow seas of the continental shelves, dolphins are highly social and move in groups called schools or pods of about 20 to several hundred.
- Breeding appears to have seasonal peaks in spring and autumn. Gestation lasts 10 to 11 months and newborns are about one meter long. They reach sexual maturity at three years old.
- Dolphins are considered to be among the most intelligent of animals. Greek and Hindu mythologies portray them as being friendly to humans.
- Dolphins are reported to have been used for military purposes ranging from finding undersea mines to rescuing trapped divers.
- Major threats to their survival include entanglement in fishing nets, marine pollution, prey depletion and hunting.
- Scientists have developed an artificial insemination technique and ways of freezing and transporting sperm for captive dolphins.
- The Year of the Dolphin will be part of the UN Decade on Education for Sustainable Development. A campaign under Prince Albert II of Monaco, involving non-governmental organizations and the private sector, has been launched to protect them.

Phone companies are charging us \$1.00 or more for 411 directory assistance calls. Rather than paying this, simply dial 1-800-FREE-411 (800 373 3411), and find phone numbers without incurring any charge except for the minutes required to make a mobile call. Jingle Networks provides the free directory assistance to any phone or internet user.

LANDTEC U.K.

Back in 1997 AEI-CASC purchased from Pacific Energy a company called Landtec. Since then, Landtec has significantly grown by providing cutting edge products and exceptional technical services at landfill gas extraction, biogas digesters and other Methane recovery projects in North and South America. In October 2006 the company made another key acquisition - this time venturing outside the US to Leamington Spa, England, about two hours north of London by train.

The English company, called Geotechnical Instruments LTD (GI), is a leading manufacturer of infrared gas analyzing equipment used in landfill gas systems and other markets including brewing, culture incubation, modified atmosphere food packaging systems, hyperbaric safety, and indoor air quality industries. Combining Landtec's innovation and production capabilities with the GI's existing design and manufacturing operations creates a dynamic company that will fulfill the industry's need for accurate and reliable greenhouse gas monitoring systems.

We are excited about the union as it meets the Company's goals of further participating in the global economy and by providing unique products and services in highly technical arenas.

Bendable Concrete?!

The nickname for Engineered Cementitious Composites (ECC) is self-explanatory: **Bendable Concrete**. Specially coated microscopic polymer fibers slide past each other instead of snapping under stress, so ECC bends without breaking. The material has been used to create stretchable expansion joints for a Michigan bridge, and to allow the coupling beams in a 41-story tower in Yokohama to flex during Japan's frequent earthquakes.

Holiday Party 2006!

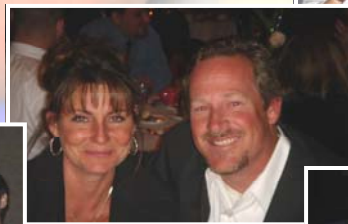

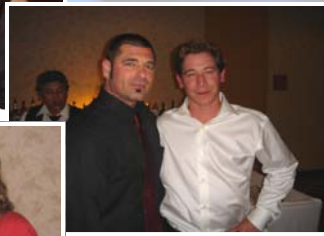

Over 200 people attended this year's Holiday party at the Riverside Convention Center. Laughter filled the air with Casino night as the theme, a live DJ bringin' down the house, festive limbo contests and an amazing stash of raffle prizes including a Plasma Screen T.V., Laptop, Tivo, and more!
